

**PRODUCT BROCHURE**

# HELLO.

We design, manufacture, supply, and maintain our own industry-leading range of energy-efficient water dispensers. From smart touch taps to bottling systems, to our unique centralised distribution system that filters water at source, our products are among the most economical and technologically advanced water dispensers in the world.

Aqua Libra Co's robust, high-capacity water dispensers are designed for organisations that care about a healthy workforce, community hydration, and a clean environment. In June 2020, Britvic Plc, a FTSE 250 company, acquired Aqua Libra Co as part of their wider sustainability journey. Britvic's 'Beyond the Bottle' strategy focuses on direct dispense of fresh, healthy drinks.

## Reinventing hydration for good

Providing tasty, healthy, sustainable, hydration everywhere is what we do and have a passion for. Our industry leading taps and smart technology play a key role in striving for net zero and helping others on their sustainability journey.

## YOUR WATER. YOUR WAY. WE MAKE IT SIMPLE.

Our product range has been designed and developed to achieve 4 key elements:

### SMART FUNCTIONALITY

Dynamic user interface for fast delivery

### PREMIUM AESTHETICS

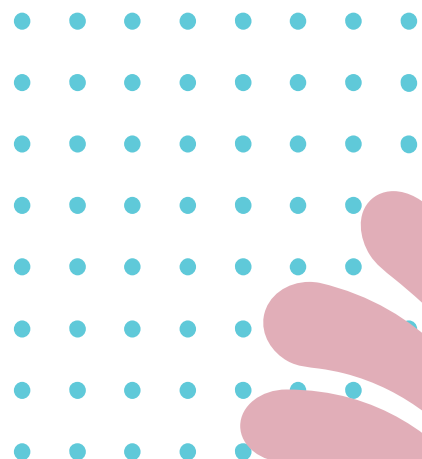

Precision design to match any style

### EXCEPTIONAL PERFORMANCE

Revolutionary technology backed by world-class service

### WORKPLACE SUSTAINABILITY

Innovative products and services to help companies improve their green credentials

# WORKPLACE.

## BE FREE FROM SINGLE-USE PLASTIC.

Approximately 7.7 billion single-use plastic bottles of water are purchased every year in the UK, with a combined carbon footprint of 620,000,000 kg of CO2 emissions.

Nearly 80% of single-use plastic accumulates in either landfill or the natural environment.

Aqua Libra Co provides a better alternative to plastic bottles. Our water-dispenser systems can dispense up to 120 litres of filtered chilled or pure boiling water per hour. That's equivalent to 240 plastic bottles of water, with a combined carbon footprint of 19.8 kg.

## STRIVING FOR NET ZERO.

Aqua Libra Co is proud to be at the forefront of environmental initiatives within the water-dispenser industry. Our products are designed and manufactured to offer sustainable hydration solutions and to minimise human impact on the environment.

**WE'RE COMMITTED TO...**

### OPERATING A SUSTAINABLE BUSINESS

We provide innovative hydration solutions that support the principles of a circular economy.

### CONSTANTLY REDUCING ENERGY CONSUMPTION

Our technology uses a fraction of the energy used by kettles and refrigerators.

### THE LOWEST POSSIBLE CARBON AND WATER FOOTPRINT

Through all of our products and processes. Every step of the way.

## TACKLING SUSTAINABILITY TOGETHER.

Aqua Libra Co is passionate about driving the reuse and refill culture; helping to reduce single-use plastic. As an organisation, it is our core value to help others to achieve their sustainability goals and provide perfect hydration solution for every workplace, hospitality venue, and retail space. We're working alongside equally passionate partners in leading net zero initiatives for sustainable growth and changes that support the principles of a resilient circular economy.

# HOW SHOULD WATER TASTE?

**PURE.**

**CLEAN.**

**REFRESHING.**

**THE BEST TASTE.**

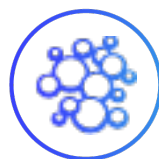

**YOUR WATER, YOUR WAY.**

**BOILING**

**CHILLED**

**SPARKLING**

**AMBIENT**

# ALWAYS THE BEST TASTE WITH UNRIVALLED PERFORMANCE.

## ZERO LIMESCALE.

### 5-STAGE FILTRATION PROCESS

We are the only company in the industry that uses purified water in the boiler, which increases water quality, eliminates limescale to ZERO and cuts faults and breakdowns by 90%. The filtration process improves the quality of the water by removing waterborne viruses, bacteria and plastic particles.

### ZERO LIMESCALE MEANS

- Increased energy efficiency.
- Extended longevity for your water-dispenser unit.
- Reduced maintenance often caused by limescale build up.

THE MAJORITY OF REPORTED  
PROBLEMS WITH HOT WATER PRODUCTS  
ARE CAUSED BY LIMESCALE.

## WATER. PURE AND SIMPLE.

Filtered water isn't the same as pure water. Filtering removes some of the minerals, microplastics, and other inorganic particles, improving the taste of the water. But filtering doesn't rid the water of chlorine, drug traces, dissolved metals, and pathogens such as *Escherichia coli*, *Vibrio cholerae*, and *Cryptosporidium hominis*.

Pure water is totally free of pathogens, giving you peace of mind that the water you drink is doing you nothing but good. Purified water is also free of all inorganic material, including the naturally occurring minerals that can build up to form limescale.

# BOILING, CHILLED, AND SPARKLING WATER. **INSTANTLY!**

Innovative boiling and cooling technologies mean that our systems are among the most energy-efficient, high capacity water dispensers on the market today.

**Low energy costs. Maximum benefits.**

**BOILING**

**CHILLED**

**SPARKLING**

**AMBIENT**

Dispense per hour - 1 cup/glass = 150ml

## ANY COLOUR, THE CHOICE IS YOURS.

### What colour? Any colour.

Aqua Alto can be matched to any RAL colour. So why not stamp your brand identity into this vital aspect of the work environment?

Whatever colour (or finish) you choose, our hydration solutions will reflect your brand's environmental policy, concern for staff wellbeing, and professional sense of style.

# SERVICE & MAINTENANCE.

At Aqua Libra Co, we take pride in our industry-leading standard of service.

Our dedicated customer care team manages installations, maintenance, and repair, as well as product enquiries, specification guidance, and all other areas of customer support. Our elite after-sales service is fully backed by a nationwide team of highly skilled technicians, who carry a well-maintained stock of parts.

When you purchase one of our water-dispenser systems, you begin a long-term relationship with us. We'll offer advice regarding the most suitable level of purification, depending on your location, the system you've selected, and the type of water your unit will be dispensing. When we install your dispenser, we'll ensure that you understand how it works and how to take care of it. Full staff training for the operation of equipment and best practices for your systems comes as standard.

## SERVICING PLANS.

There are various maintenance plans to choose from. Perhaps all you wish for is an annual service. Maybe you'll opt for PPM (planned preventative maintenance) or an all-inclusive package.

Our fully trained, multi-brand engineers carry a wide range of parts – not only for Aqua Libra Co products, but also for other major brands. Thanks to our consistently cost-effective, reliable service and best call-out times in the industry, Aqua Libra Co is a popular choice when it comes to the service and maintenance of all leading-brand water dispensers.

# OKTRA.

Transforming working lives (and hydration).

## CHALLENGE

Oktra is an award-winning office design company with branches in London, Stafford, and Guildford. Dedicated to prioritising sustainable solutions, this company's mission is to strengthen the relationship between people and their environment, drive wellbeing and green initiatives within the built environment and work communities, and to create spaces that inspire people to do amazing things.

We've worked with Oktra on many commercial projects, but on this occasion, they were looking for a high-performance hydration solution for their very own office in Farringdon. The Oktra team wanted their new water-dispense system to be energy efficient, space saving, and a good match for their office décor.

## SOLUTION

The Aqua Libra Co team installed two Aqua illi Taps in stylish Satin Black finish, each dispensing boiling, chilled, and sparkling water. At one of the hydration stations, the tap features a 60mm extension to enable bottle filling.

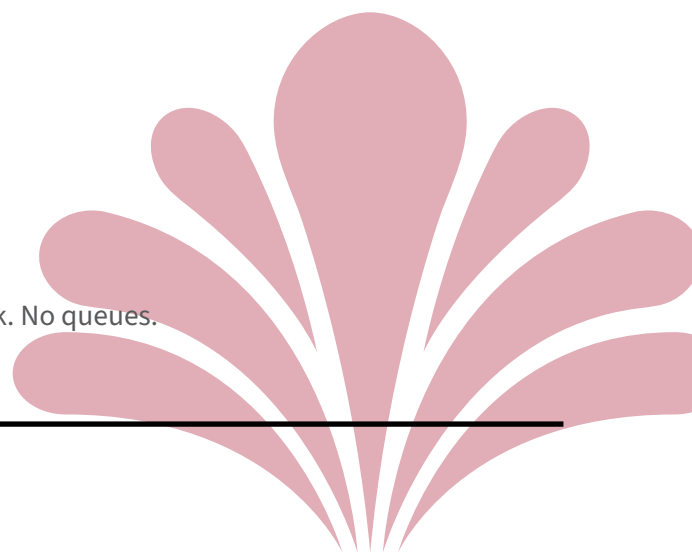

# AQUA ALTO.

Hydration in colour.

Boiling, chilled, and sparkling water. The POWER OF THREE.

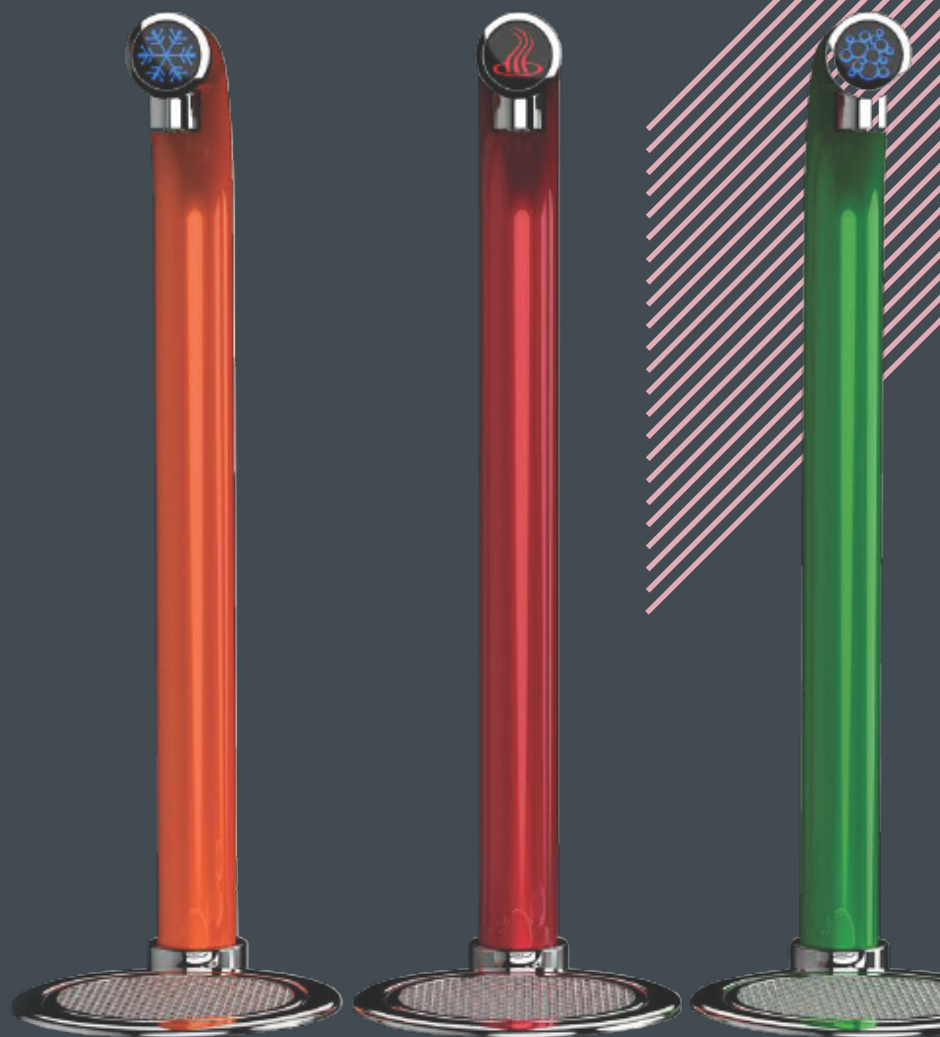

And don't forget the colour. What colour? Any colour! Great look. No queues.

# THE POWER OF THREE.

Three taps and one base unit to reduce queues.

- Multiple taps can be used on one system to reduce queues
- Sleek design available in any colour
- Patented boiler design gives high volumes of boiling water
- Installed in modular form to fit into the tightest of spaces
- Perfect water flow with zero splash
- Plumbed-to-waste flush-fitting drip tray
- Preset fill volumes for any vessel and free flow options available
- Designed to fill water bottles without the need for font extension
- Equality Act compliant controls available

# CAFÉ SPICE NAMASTE

Café Spice Namaste has chosen our high-capacity Aqua Alto water dispenser with three individual taps in blue, red, and white

## CHALLENGE

Cyrus has always promoted sustainable solutions in the hospitality sector. His passion for reducing the carbon footprint and giving back to the community has driven his business forward, helping him make the right choices when it comes to suppliers. Bottled water, which clocks many “water miles”, will not be featuring on his menu. Instead, Cyrus wants a high-performance water dispenser to serve fresh, filtered drinking water in own-branded water bottles.

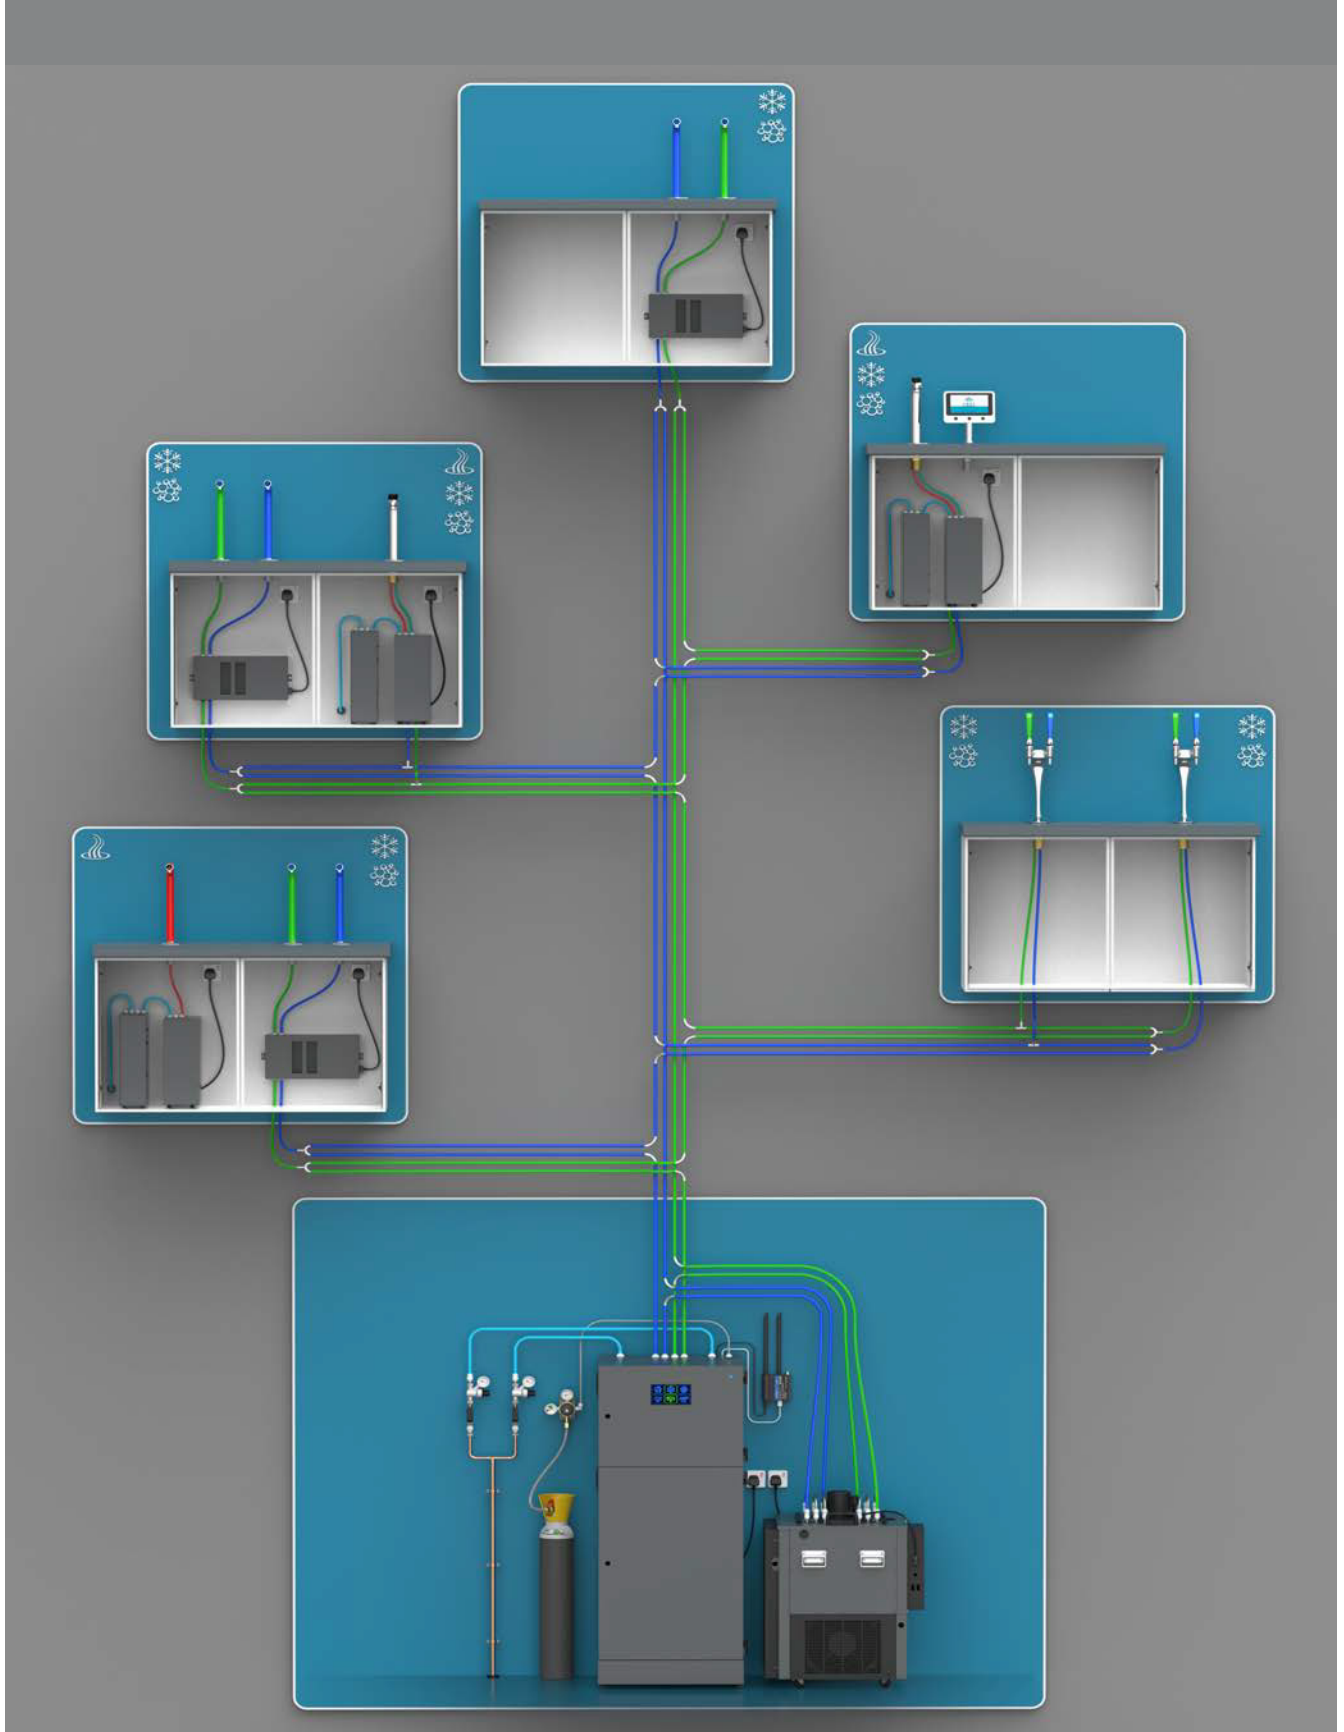

## SOLUTION

For the ‘new’ Café Spice Namaste at Royal Docks, Cyrus has chosen our high-capacity Aqua Alto water dispenser with three individual taps in blue, red, and white. The restaurant’s new Aqua Alto taps will dispense high volumes of chilled, sparkling, and boiling water. The perfect solution for a busy environment with high demand for hot and cold drinks.

*sustainability in hospitality has always played a significant role in my approach to business. When it comes to choosing suppliers, we only partner with those who share our sustainability ethos. And Aqua Libra Co was the perfect choice for us, ticking all the boxes. We look forward to working on a few projects with the team at Aqua Libra Co, including a refill location and giving back to community campaigns through the Café Spice Namaste restaurant.”*

**Cyrus Todiwala, Owner of Café Spice Namaste**

# AQUA LINK.

The world's number-one centralised dispense system.

A centralised and fully monitored water distribution system that delivers high volumes of chilled water – still and sparkling – to multiple dispensers throughout an entire building.

# CHOOSE AQUA LINK FOR YOUR BUSINESS

Aqua Link saves space at the dispense points and reduces costs. Aqua Link also helps to minimise your water use and any impact on the environment from your water systems.

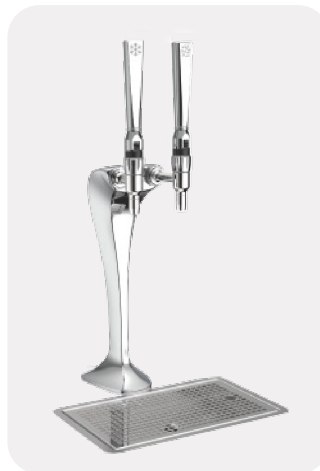

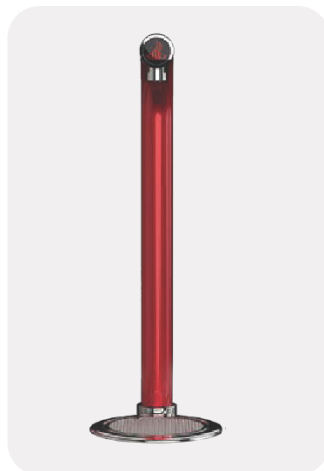

**For flexibility, economy, sustainability, and choice, you can't do better than Aqua Link.**

Aqua Link can be incorporated into a newbuild or installed retrospectively into an established building. At any time, an additional dispense unit can be installed – whether that's the Aqua illi, Aqua Alto or Aqua Bottling System.

## Smart & dynamic reporting

Using the latest smart technology, the Aqua Link control unit provides dynamic reporting on:

- Volume of water dispensed.
- Flow rate.
- Water temperature (with safety controls).
- Incoming mains water pressure.
- Leak detection.
- CO2 replacement management.

## TALK TO US

London showroom: 1 New Street, London, EC2M 4TP

[www.aqualibra.com](http://www.aqualibra.com) | 0800 080 6696 | [hello@aqualibra.com](mailto:hello@aqualibra.com)

# RHUBARB.

Rhubarb has chosen Aqua Link, our centralised water distribution system that delivers high volumes of chilled and sparkling water.

## CHALLENGE

Rhubarb was looking to streamline its operations. They wanted to find water dispensers that deliver high volumes to respond to a busy environment and are cost effective, so Rhubarb can pass savings on to their customers. Accommodating over 600 people daily, Rhubarb wanted to ensure that they purchase aesthetically pleasing, energy-efficient water dispensers that meet their sustainability goals and satisfy their capacity requirements. Rhubarb chose our centralised dispense system, Aqua Link, as they wanted to install five Aqua Alto taps to match their interior design. Four tea points are spaced out across the restaurant and the terraced bar, which is called “The Market”.

## SOLUTION

Rhubarb liked the idea of distributing water through pipes from one centralised point as it is 45% more cost effective and around 50% more energy-efficient than individual water-dispense units. This allowed Rhubarb to save cupboard space at dispense points and save energy by not running individual water systems. Aqua Link system not only allows Rhubarb to dispense high volumes of sparkling and still water, but with its intensive filtration and LED ultraviolet purification, Rhubarb can preclude 99.99% of pathogens and inorganic impurities from the mains water before distribution.

# AQUA TOUCHLESS.

Good practise for a hygienic workplace

Aqua Touchless helps to minimise virus risks in your workplace.

Smart reporting helps you and your staff monitor your sustainability programme.

# CHOOSE AQUA TOUCHLESS FOR YOUR BUSINESS

When it comes to providing hot and chilled drinking water within a populated environment, a safe and easy-to-use dispense solution is key. Our gesture-controlled Aqua Touchless is the perfect hydration solution for your staff and customers. Touchless One and Touchless Two available today.

WITH MECHANICAL TAP 60 & 120**

**AQUA COUNTERTOP 60**

REFILL. REUSE.

## AQUA BOTTLING SYSTEMS.

Designed to dispense high volumes of pure, chilled table water, the Aqua Bottling System provides a practical and sustainable alternative to packaged water.

### BOTTLER UC

- High volumes of great-tasting chilled, filtered water – still and sparkling.
- Fits neatly into a 600mm x 600mm cupboard, saving countertop space.
- Eliminates the need for single-use plastic bottles and the 'water miles' associated with deliveries.
- Choose the Aqua Alto or Mechanical Tap for a stylish finish and ergonomic dispense.

### AQUA COUNTERTOP

- Convenient for refilling water bottles with chilled, filtered water throughout the day.
- Attractive finish with the Aqua Alto tap.
- Compact size ideally suited to a busy office environment.
- Massively reduces your impact on the environment by eliminating the need to transport and store pre-bottled water.

# BRAT

Refreshing chilled water, still and sparkling, on tap!

## CHALLENGE

Brat was looking to install a sustainable hydration solution for their customers. Their top priority was to provide fresh, delicious chilled and sparkling water via individual water taps in their extremely busy refreshment areas. However, they also wanted to ensure that the chosen water dispenser promoted their approach to sustainability in the workplace and complemented the restaurant's interior design.

## SOLUTION

Brat decided to install one Undercounter Aqua Bottler with Mechanical tap to dispense large amounts of chilled water, both still and sparkling. The unit is positioned behind the bar for the convenience of their staff.

*"Since I've been working in the hospitality industry, I've always found it time-consuming to serve jugs of water to my customers. With our new Undercounter Aqua Bottler, I and my team are more time-efficient - and we love dispensing water from our new taps! When we started our journey with Aqua Libra Co, we were delighted to see that their sustainable product design matches Super 8's core values and Brat restaurant's interior design. The team at Aqua Libra Co has been very responsive and has completely met our expectations."*  
Blaise Coley, General Manager

# COPPA CLUB

Coppa Club were looking for a sustainable hydration solution – one that provided fresh, great-tasting water in their very busy refreshment areas.

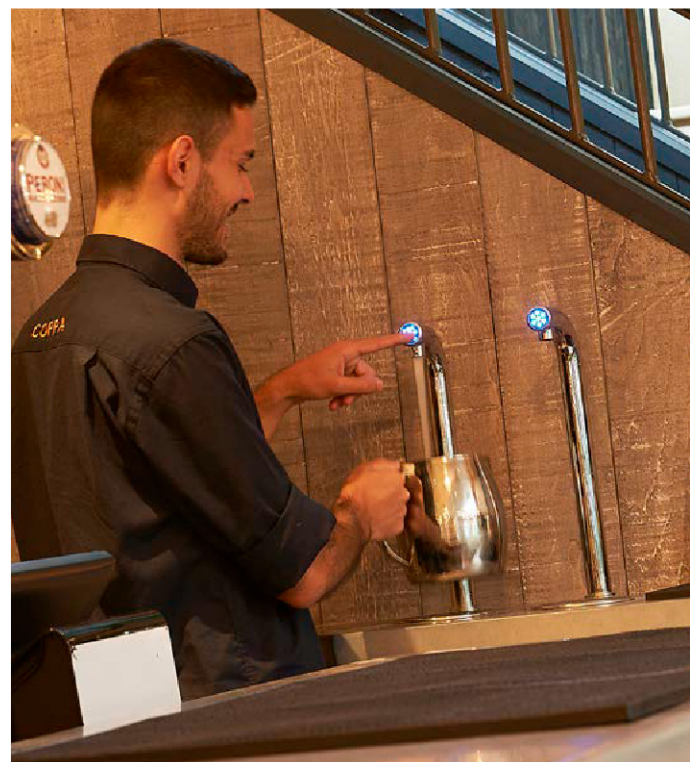

## CHALLENGE

The procurement team at Coppa Club were looking for a sustainable hydration solution – one that provided fresh, great-tasting chilled and sparkling water via individual water dispensers in their very busy refreshment areas. They set out the criteria: high-performance water dispensers to fill refillable bottles; reliable customer service; and top-quality aesthetics to match their premium interior design. As well as offering cold water drinks, they needed an integrated boiling and ambient water dispenser behind the bar for the preparation of drinks.

## SOLUTION

Coppa Club has decided to install two Aqua Alto taps in Chrome to dispense high volumes of chilled water, both still and sparkling. These are positioned in the prime location near the bar for the convenience of their staff.

*"Every restaurant should offer fresh drinking water. Here at Coppa Club, we're focused on sustainability, and we were looking for an equally passionate hydration partner. The Aqua Libra Co team has been very responsive and has fully met our expectations. Therefore, we're rolling out the programme of installing Aqua Libra Co taps in all our Coppa Club restaurants across the UK."*  
Tom Jennings, Property Project Manager

# AQUA LIBRA BOTTLES

Your Brand. Your Water. Your Way.

Aside from great-tasting water, Aqua Libra Co also offers a custom bottle-branding service to maximise presentation. We work hand in hand with our clients to provide stand-out designs, messages, or logos on each bottle to give your staff and customers that feeling of luxury.

**BERLIN**

**OSLO**

**KROPFHAL**

# FLAVOUR TAP

## The future of dispense

The UK's first pure water & flavoured digital dispense tap, which offers the most sustainable healthy hydration straight to your reusable vessel.

# FEATURES.

Aqua Libra Flavoured Dispense helps soft drink customers who want tasty healthy, sustainable hydration at work and on-the-go by reimagining dispense technology in order to reduce our packaging waste and carbon footprint unlike current dispense solution.

## Micro Dose Technology

Hundreds of serves per cartridge

## Digital & Data

Built on a true IoT platform our digital innovation & data opportunity is the best in market

## Pure Water

Beautifully filtered still & lightly sparkling water

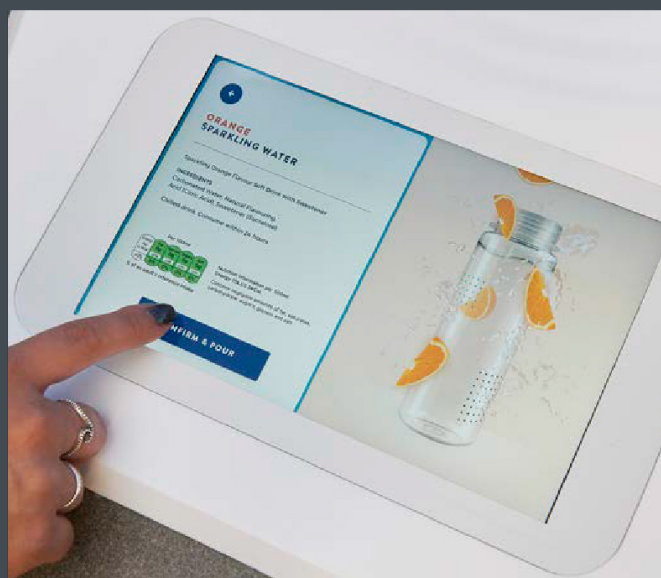

## Natural Flavours

Drawing on our experience in flavour with the UK's fastest growing infused water brand

## Healthy

Natural flavours, No added sugar,  
No preservatives, No calories.

**Our solution is designed to help remove the need of single use plastic.**

- Filtered still and sparkling water
- Natural flavours
- No sugar
- No preservatives
- Hundreds of serves from each sustainable cartridge

# AMAZON WEB SERVICES

Supporting Corporate Sustainability and Wellness Goals

Britvic's Aqua Libra Flavour Tap sits on a cabinet-sized unit in office kitchens and retail shops. The distinctive, streamlined design includes a simple touchscreen interface that provides user with a selection of products and dispenses a finished drink in seconds.

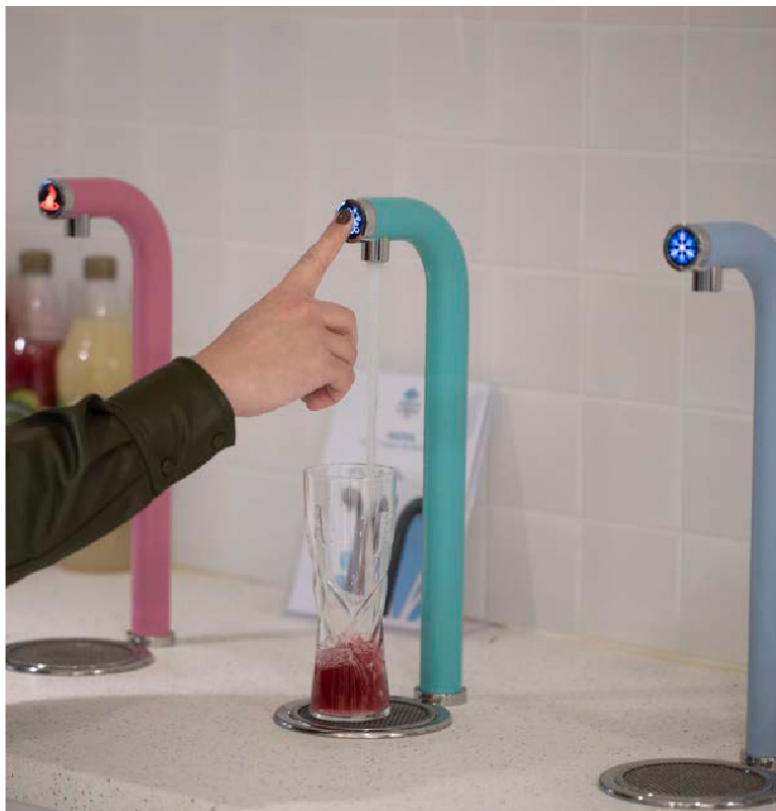

Under the countertop, a high-tech cartridge powered by Internet of Things (IoT) technology releases micro-doses of sugar- and additive-free flavoring into the water. The digital interface, data analytics on flavor tap usage, and IoT capabilities all use AWS.

Britvic sees this as an opportunity to eliminate single-use plastic beverage containers and provide a way for consumers to drink fewer sugary drinks, thus making a positive impact on the environment and personal health.

*"With Aqua Libra, we're offering a new proposition for customers to reduce their carbon footprint, while providing healthy hydration options for staff and shoppers,"*

Scott MacKenzie, Director of Beyond The Bottle Platforms

# THANK YOU.
